

## Concrete Grinders

Northrock offers a range of various grinders for concrete ceilings and other applications.

These machines are designed for long-term reliability combined with the operating efficiencies needed to get

work done quickly and easily. With a choice of power units and heavy-duty frames, Northrock grinders withstand the rigors of these tough applications and give many years of superior service.

### CEILING GRINDERS

Northrock PRO1200 Series of ceiling grinders are designed for condominiums, hotels, parking garages, tunnels and any other applications where poured concrete ceilings have joint lines that need to be trimmed and finished. Using a simple yet effective winch and pulley system, these

grinders reach 7' to 12' destinations quickly and easily with the operator stationed safely at ground level. Large, extra-wide 12" diameter tires feature ball bearings that allow the machine to roll smoothly over chunks of concrete and other jobsite debris.

### Power Units

Northrock ceiling grinders are available with either 1-½ hp electric or 4 hp gasoline-powered motors designed for remote applications or sites without

electric power. These units run at 3500 RPM and are sized to handle even the most difficult grinding chores without stalling.

## Heavy-Duty Construction

These grinders are built with strong yet lightweight aluminum frames for durability combined with ease of handling. The frames themselves minimize operator fatigue while resisting rust from damp concrete environments and exposure to the elements.

The working end of the machine includes a self-aligning grinding head with a  $\frac{5}{8}$ " –11 spindle thread that

accepts a wide range of grinding wheels and brushes. The head automatically adjusts to the surface being finished. A spring-tensioned handle maintains surface pressure regardless of surface condition.

For more information or a demonstration, contact your local Northrock dealer or Northrock directly at 1-800-989-8423.

## UTILITY GRINDERS

Northrock's line of hand-held grinders are perfect for finishing terrazzo or other concrete applications. They are ideal for grinding, trimming, sanding, polishing and buffing.

## Choice of Shafts

Northrock's field-proven, heavy-duty flexible shafts are available in lengths from 6 feet to 14 feet to suit the application.

## Choice of Handpieces

Handpieces for Northrock grinders are available in three configurations – straight and 1:1 or 4:1 right angle heads. A  $\frac{5}{8}$ "–11 spindle thread is standard; a  $\frac{3}{4}$ " spindle with clamp is available as an option. Right angle heads are available with a water system at the spindle for applications where cooling is desirable.

For an off-the-shelf Northrock grinder custom-configured to suit your needs, contact your local Northrock dealer or Northrock directly at 1-800-989-8423.

## Choice of Power Units

These machines may be driven by a choice of either 115 volt or 220 volt AC power sources running at a choice of 3450 or 1725 rpm.

## Choice of Frames

Northrock power units may be mounted on either skid frames for more stationary applications or on popular rolling tripods for jobs where mobility is required.

As with all equipment of this nature, please use common sense and follow customary safety precautions when operating this equipment: Steel tip shoes, hard hats, eye protection, gloves and long sleeves are recommended.
